Professional Summary

Aspiring Data Analyst skilled in Python, SQL, Power BI, and Excel, with hands-on experience designing databases, building dashboards, and developing end-to-end data-driven applications. Experienced in data cleaning, structuring information from multiple sources into centralized systems, and automating reporting workflows. Comfortable working independently with large, real-world datasets and translating technical work into clear, actionable insights.

Education

Sagi Rama Krishnam Raju Engineering College

2024 – 2028

Bachelor of Technology in Computer Science / Information Technology

Bhimavaram, Andhra Pradesh

Projects

Internship Attendance Management System (Centralized MIS) | *Python, React, Node.js, Express.js, MongoDB, SQL* **2026**
[GitHub](#) | [Live Demo](#)

- Designed and built a centralized management information system to consolidate and standardize daily attendance data for internship students, replacing scattered manual tracking with a single reliable data source.
- Structured a database schema to store, validate, and query attendance records accurately, ensuring data integrity across multiple users and sessions.
- Built an end-to-end application integrating frontend reporting views, backend services, and database management to automate record-keeping and reduce manual reporting effort.
- Documented system workflows and data structure to support maintainability and continuity of the platform.

Real-Time Housie / Tambola Analytics Platform | *React, Node.js, Express.js, Socket.IO, MongoDB*

2026

[GitHub](#) | [Live Demo](#)

- Built a real-time multiplayer platform processing live participant and game-state data, with synchronized updates, ticket tracking, and prize validation logic.
- Implemented real-time data pipelines using Socket.IO to synchronize events and monitor system performance across all connected users.
- Validated system reliability and data accuracy at scale, successfully testing with **170 concurrent participants**.

Business Data Analytics & Dashboarding Projects | *SQL, Python, Power BI, Power Query, Excel*

2025 – 2026

- Built interactive Power BI dashboards with DAX measures and Power Query transformations to consolidate raw data into business-ready reporting views.
- Performed data cleaning, validation, and structuring on multi-source datasets using Python (Pandas, NumPy) and SQL to ensure accuracy for downstream analysis.
- Used SQL for data extraction, aggregation, and querying across relational databases to support performance and progress monitoring use cases.

Technical Skills

Data & Analytics: Power BI, DAX, Power Query, Microsoft Excel, Data Cleaning, Data Visualization, Pandas, NumPy, Matplotlib

Programming Languages: Python, SQL

Databases: MySQL, MongoDB

Automation & APIs: REST APIs, Socket.IO, ChatGPT / LLM-based tools

Web Technologies: HTML, CSS, React.js, Node.js, Express.js

Developer Tools: Git, GitHub, VS Code, Jupyter Notebook

Certifications & Achievements

Certifications: SQL (Intermediate, HackerRank) · SQL (Basic, HackerRank) · Power BI for Beginners · Introduction to Generative AI · AI Tools and ChatGPT Workshop

Achievement: Real-Time Data Platform — validated at scale with 170 concurrent users
